

**ASTALDI TO BUILD *CAMPIDOGLIO 2*,  
THE NEW OFFICES OF ROME'S MUNICIPAL AUTHORITY**

*The value of the works to be performed stands at EUR 145 million*

*Rome, 10 October 2012* – Astaldi Group has been assigned the project finance contract to construct and manage "Campidoglio 2", the new offices of Rome's municipal authority.

The contract involves the final and executive design, construction, maintenance and management of an offices complex located in Rome's Ostiense district.

The value of the works to be performed stands at EUR 145 million. An annual fee of EUR 15 million for maintenance and management activities will be paid for the complete duration of the concession equal to 25 years starting from the completion of the works.

Works are planned to commence in 2013, and will last for approximately 3 years. The contract is expected to be signed subsequent to finalisation of the usual tender procedures.

The project will result in construction of 5 new buildings able to accommodate 4,350 employees, 3 multi-storey car parks for a total of 2,000 parking spaces, an auditorium able to seat 800 and some facilities for use by the local community (public green spaces, a conference room, a library, a gym, a nursery and some restaurant facilities). Renovation of the existing industrial building previously used as a tobacco processing plant is also planned.

The "Campidoglio 2" project's main aims include streamlining of Rome's municipal authority's central office network, resulting in an ambitious project to upgrade the city's historical Ostiense district. The new offices complex will form a state-of-the-art technological hub, built according to international standards for eco-sustainability, and will incorporate renewable energy production plants that will be built by NBI (the Astaldi Group company specialized in renewable energy and eco-sustainable technologies).

*ASTALDI GROUP is the leading General Contractor in Italy, working in the design, construction and management of public infrastructures and large-scale civil engineering works, mainly in the transport infrastructures, energy production plants, civil and industrial constructions, and systems.*
